

Acronis Cyber Protect Cloud Integration with cPanel

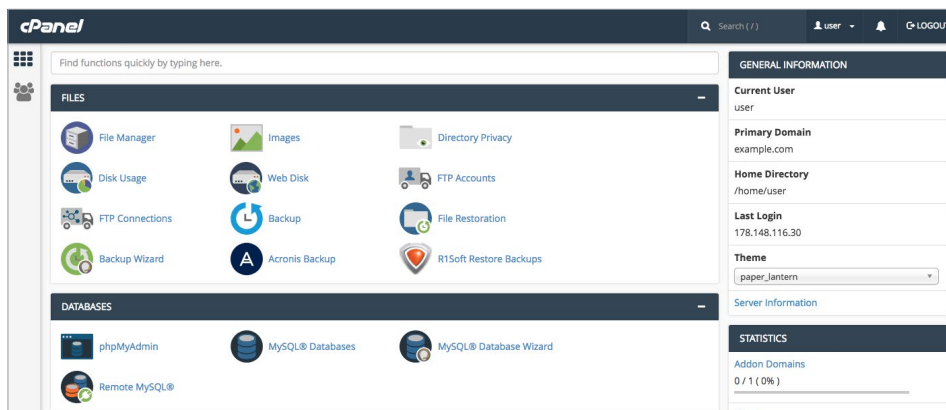

Complete Server Backup, Including Self-Service Recovery Capabilities for Clients

WHAT'S THE IMPORTANCE?

With cyberattacks growing in sophistication, speed, and intensity, hosters and web professionals need to focus more on when an attack will compromise their websites, not if. Application weaknesses and software vulnerabilities continue to be the most common means by which cybercriminals carry out external attacks. With a website susceptible to malicious code injection and third-party vulnerabilities, the risk of data leakage or a full-scale data breach have never been greater, threatening the integrity of whole businesses and the privacy and security of their users. The only reliable method to ensure site availability and avoid permanent data loss is backup.

ACRONIS BACKUP PLUGIN FOR WHM AND CPANEL

This plugin integrates WHM and cPanel with the Acronis Cyber Protect Cloud solutions. The Acronis Backup plugin for WHM and cPanel offers hosters and web professionals reliable server and website protection, including cloud backups plus granular, self-service recovery capabilities for end clients.

Acronis

ABOUT ACRONIS CYBER PROTECT CLOUD

Acronis Cyber Protect Cloud is a platform that enables you to deliver cyber protection in an easy, efficient, and secure way. With one SaaS solution, you and your clients gain access to hybrid cloud backup, disaster recovery, AI-based ransomware protection, file sync and share, and blockchain-based file notarization and eSignature services, all managed from a single console.

- Differentiate your offering with next-gen cyber protection
- Deliver cutting-edge antimalware and antiransomware technologies at an affordable price
- Protect 34+ hosting platforms and workloads
- Reduce churn with easy upsell and cross-sell opportunities
- Shorten your proof of concept and deployment stages with a ready-to-use cloud solution
- White-label your services to increase brand value
- Leverage a RESTful API for additional integrations

ACRONIS BACKUP PLUGIN FOR WHM AND CPANEL INSIGHTS

With the Acronis Backup plugin for WHM and cPanel, hosters and web professionals can leverage key cyber protection features.

Back up an entire cPanel server to the cloud storage with the disk-level backup.

The entire cPanel server can be backed up on a predefined schedule and to a cloud storage space. Backups can also be started on demand. The backup schedule and other parameters can be configured in the backup console.

Recover the entire server including all of the websites.

You can easily revert the entire server and all the included websites to a pre-selected recovery point. You can track the progress of the operation in the backup console.

Perform granular recovery of websites, individual files, mailboxes, mail filters, mail forwarders, accounts, and databases.

Recover websites, files, mailboxes, mail filters, mail forwarders, accounts, and databases, in seconds from a single backup. Granular restore dramatically reduces recovery time.

Enable backup encryption.

To encrypt your backups, you can simply enable the encryption switch and further specify the corresponding settings.

Enable self-service recovery for cPanel accounts.

Reduce support costs and increase flexibility by allowing your clients to restore a website, individual files, folders, databases, mailboxes, mail filters, mail forwarders, and an entire account on their own.

ACRONIS BACKUP PLUGIN FOR WHM AND CPANEL INSIGHTS

- Create a premium service for all clients, or enable self-restore capabilities for those who opt-in for a premium subscription – the cPanel plugin makes it easy
- Protect your clients by performing backups on-demand, choose how often to back up, and view recovery activity across all hosted clients
- Restore and export individual cPanel end client accounts
- Enable or disable the self-service recovery feature in your clients' service plans or do so directly within the cPanel for individual client subscriptions
